

TheraTouch

Rehabilitative Therapy Using a Multi-Touch Device

Scott Boykin, Adam Burt, Cristina Cline, John Farris, Jeff Gettel,
Andrew Hughes, Kevin Lawhon, Mason McGlothlin, Nipuna Perera,
Mandy Seremet, Joey Wilkinson

Faculty Sponsor: Dr. Donnell Payne

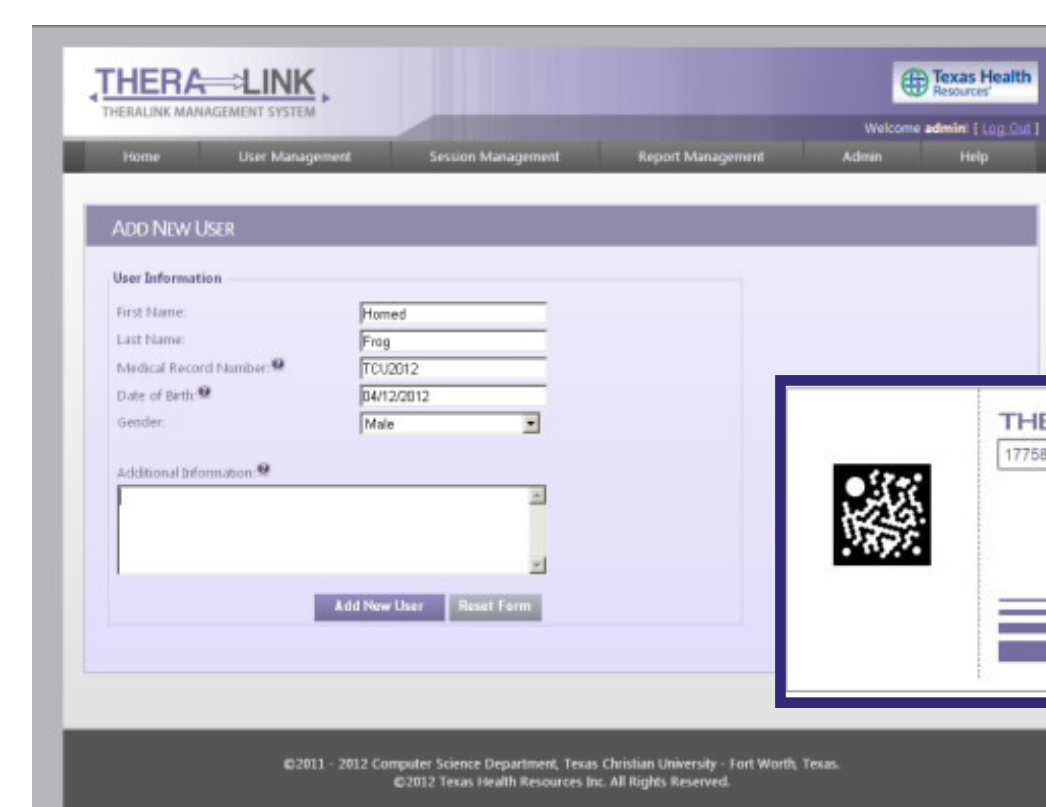

Motivation

- Multi-touch technology offers potential for innovative rehabilitative therapy
 - Color animation makes traditional activities more stimulating
 - Enhances patient interaction through engaging therapeutic exercises
- Automated data collection
 - Reduces need for pen and paper note-taking
 - Promotes open collaboration between therapist and patient
- Report collected metrics
 - Provides visual representation of performance
 - Establishes trends for potential use in research and diagnostics

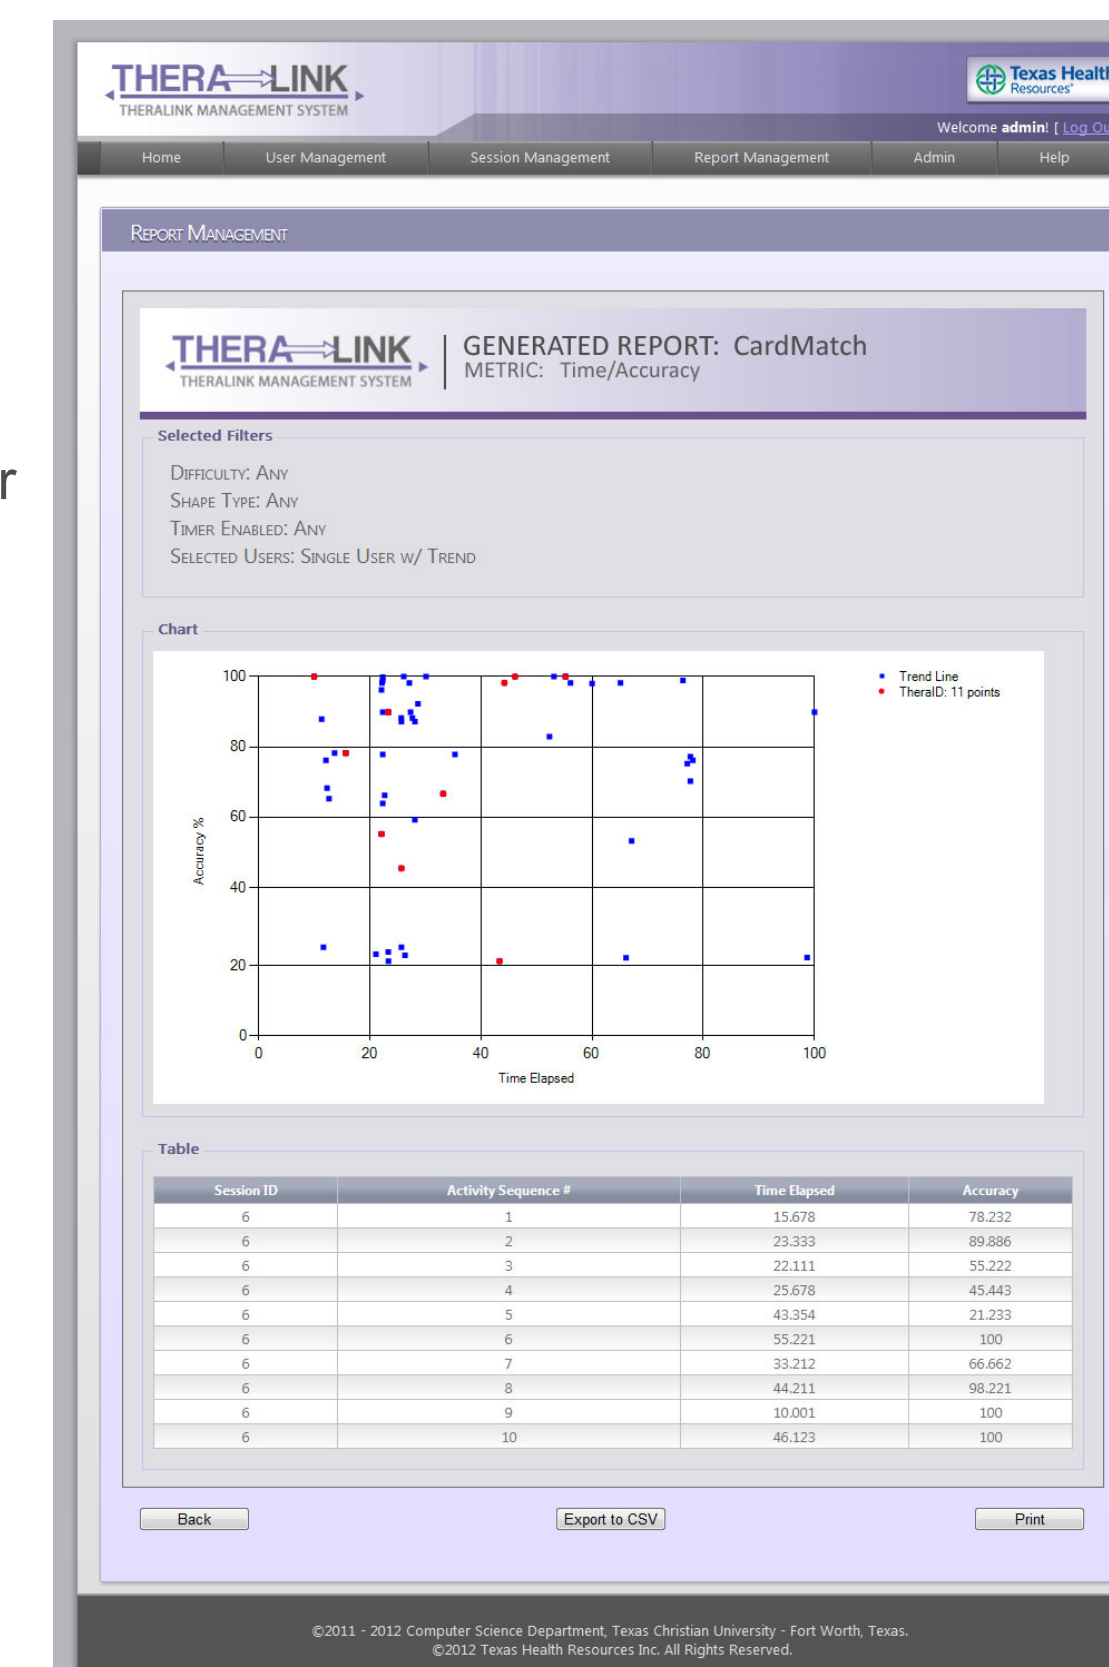

TheraLink

Therapists establish patients within TheraLink to allow for interaction with the entire TheraTouch system.

The TheraTag is unique for each patient and utilizes identity tag technology to communicate with the Microsoft Surface.

Therapists create sessions containing therapeutic activities. The sessions can be customized to meet individual patient needs by selecting specific activities and defining their options.

TheraLink provides reporting for all therapeutic activities, allowing a therapist to track patient progress and identify trends within populations.

Function vs. Activity

Activity	Attention	Categorization	Language	Immediate Memory	Working Memory	Location Memory	Motor Skills	Recognition	Sequencing
All Trial Making		✓	✓	✓			✓	✓	✓
Block Bash		✓					✓	✓	
Bubble Pop				✓	✓	✓	✓	✓	
Card Match						✓	✓	✓	
Find the Way						✓	✓	✓	
Maze						✓	✓	✓	
Metronome	✓						✓	✓	
Odd One Out		✓				✓	✓	✓	
Path Track					✓	✓	✓	✓	
Sequence				✓			✓	✓	
Snak Slaps			✓	✓		✓	✓	✓	
Slope Match	✓		✓	✓	✓		✓	✓	
What Time Is It			✓				✓	✓	
Vending Machine			✓				✓	✓	
Wipe the Table					✓		✓	✓	

Goals

- Create a suite of activities to test multiple functional areas within the scope of speech, occupational, and physical therapies
- Develop a framework with a common set of utilities that readily allows for the addition of future activities
- Implement a web-based management system that provides the ability to manage users and sessions
- Output collected activity data into comprehensive reports for analysis

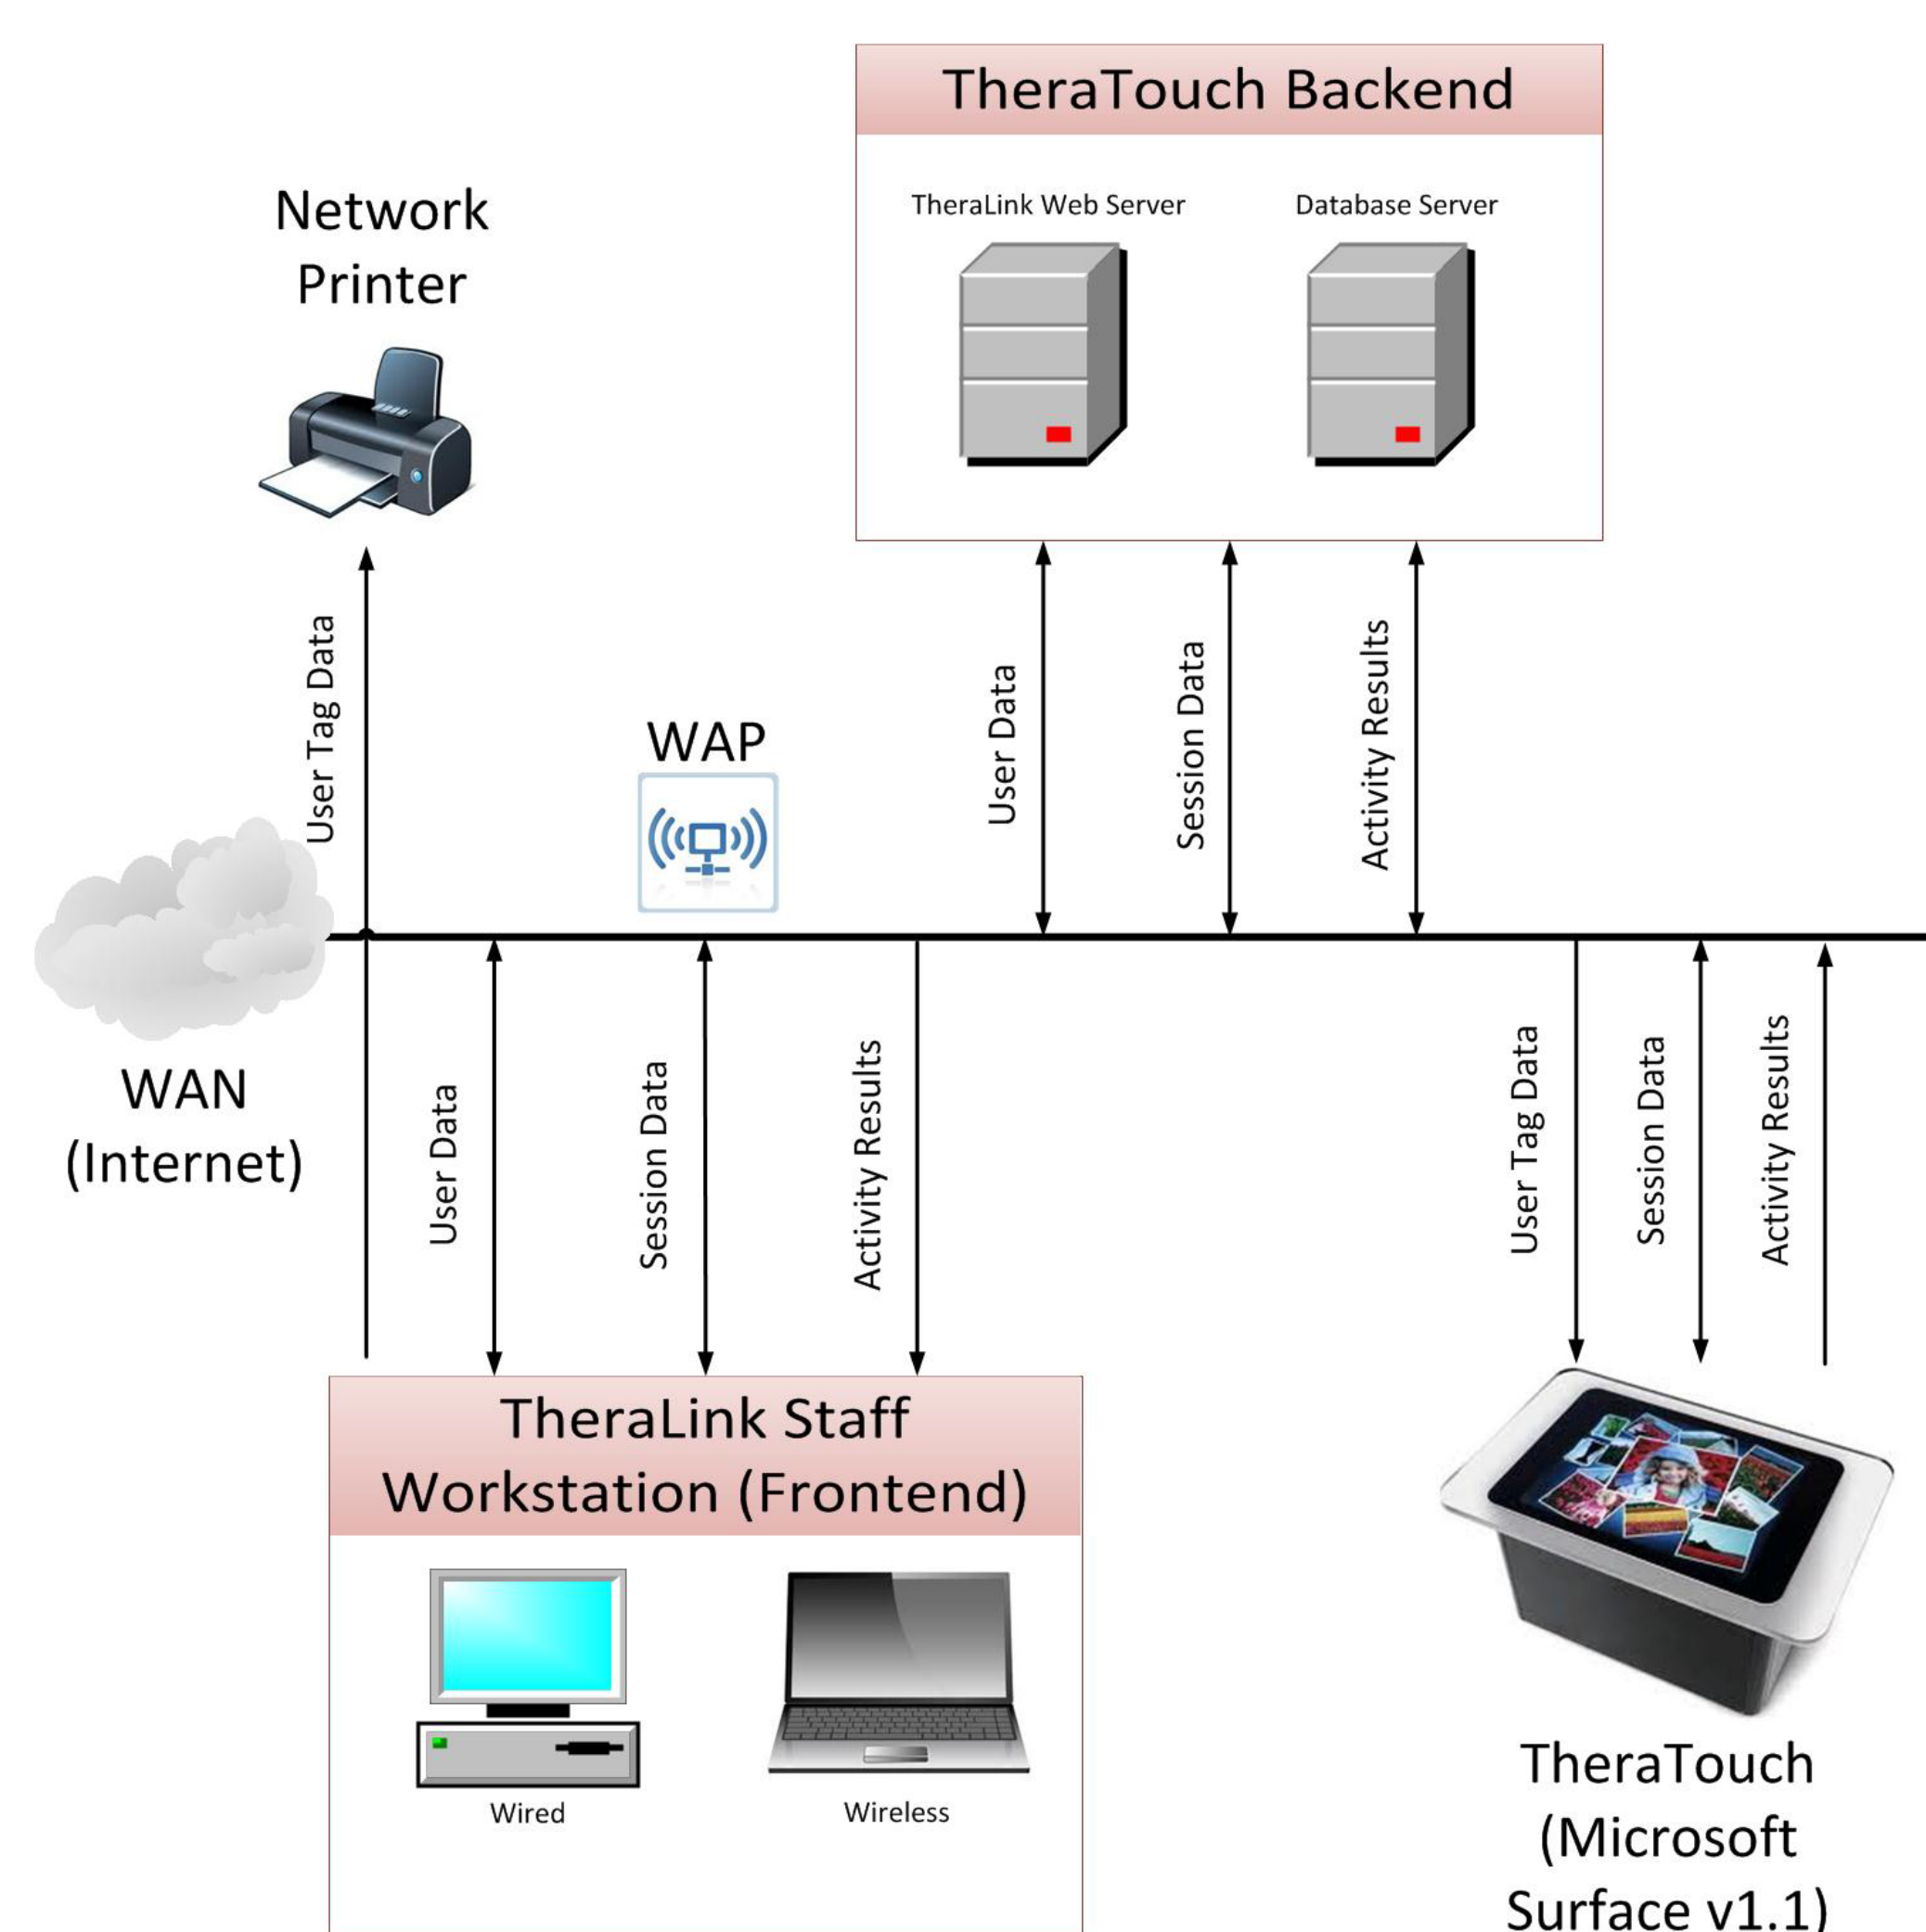

Therapeutic Activities

Results

- Designed and developed a suite of 15 activities for all three variations of therapy, with most covering multiple functional areas
- Established a framework with essential shared utilities for a common appearance and easy installation of additional activities
- Deployed TheraLink, a web-based management system, to provide clinical staff with the ability to manage users, create therapy sessions, and report collected information
- Rolled out TheraTouch system to Texas Health Harris Methodist (HEB) – Physical Medicine & Rehabilitation Clinic

System Architecture

Acknowledgements

The TheraTouch team would like to thank Dr. Malcolm Stewart from Texas Health Presbyterian Hospital Dallas and Mike Skupien from Texas Health Resources for generously giving of their time to assist in this project. We would also like to express our sincere appreciation to Director Jeanie Parsley and therapists Rob Robinson, Rachel King, Michelle Luckey, and Makiko Ogawa from Texas Health Harris Methodist Hospital – HEB for assisting in the definition of therapeutic activities that were included in the TheraTouch system. In addition, we would like to thank Roger Kriesman and RadioShack for the generous donation of three Microsoft Surface units, making this project possible.
