TOYOTA TEAM

- Project Leadership and guidance
 - Gaurav Lall – gaurav.lall@toyota.com
- Project Co-ordination and technology support
 - Tai Trieu – tai.trieu@toyota.com
- Axon and EDC (Data Catalog and Business Glossary)
 - Aritra Das – Aritra.das@toyota.com
- Informatica Data Quality (IDQ)
 - Arpita Santra – Arpita.Santra@toyota.com

AGENDA

- Problem Statement
- Project Background
- Sprint 1
- Sprint 2
- Sprint 3
- Sprint 4
- MVP Demo
- Winter Sprint

PROBLEM STATEMENT

The problem of

- *Disjointed system to record, store, check and correct all the data in the ecosystem/ no holistic view of data*

affects

- *Employees/ Business partners of TFS*

the impact of which is

- *Unorganized data, manual process of linking physical and business data elements which is time consuming*

a successful solution would be

- *Data to be organized by business areas such as Loan Originations, Insurance, Servicing etc.*
- *Ability to do google like search for any data element which would bring up business definitions, physical attributes, data quality rules & profile and any related data associated with it*

Create a portal where we can visualize data duly categorized that end users of TFS can use for visualization and solving their business problems

Connect the datasets spread in different systems (Axon, Informatica Data Quality and EDC)

Use CKAN as Database Management System

PROJECT BACKGROUND

SPRINT #1 (OCT 6 - OCT 20)

Explore CKAN

An open-source DMS (data management system)

Powers data hubs and data portals.

Makes it easy to publish, share and use data.

Launch CKAN on AWS

Understand project requirements

Created Use Cases

SPRINT #2(OCT 20 – NOV 03)

Upload Example Data

Upload data using CKAN UI
Upload data using python script

Software Architecture

Learn Data classification

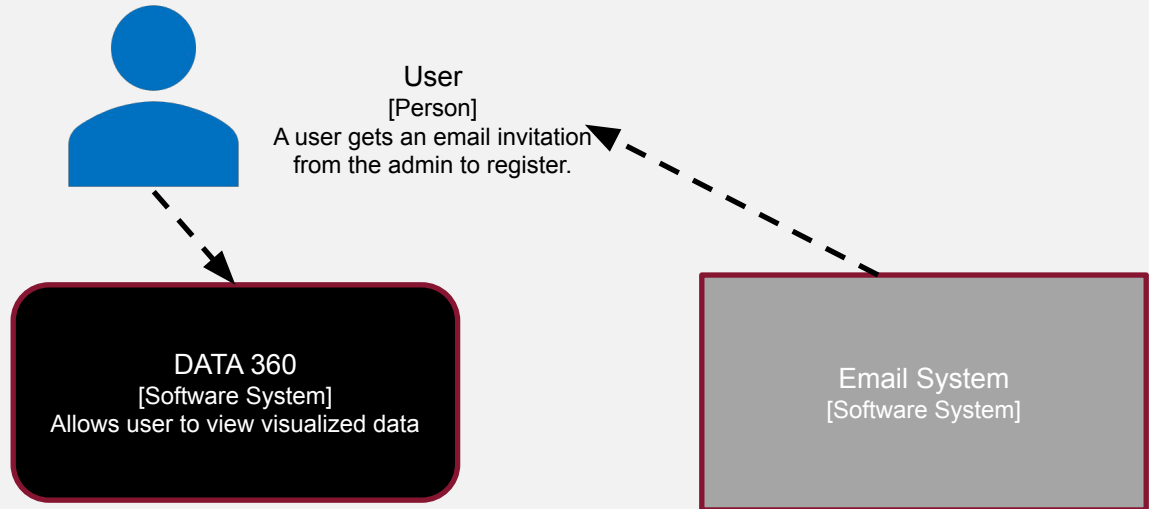

Analyze Data connectivity
Design the architecture

Application Prototype

[Link for the prototype](#)

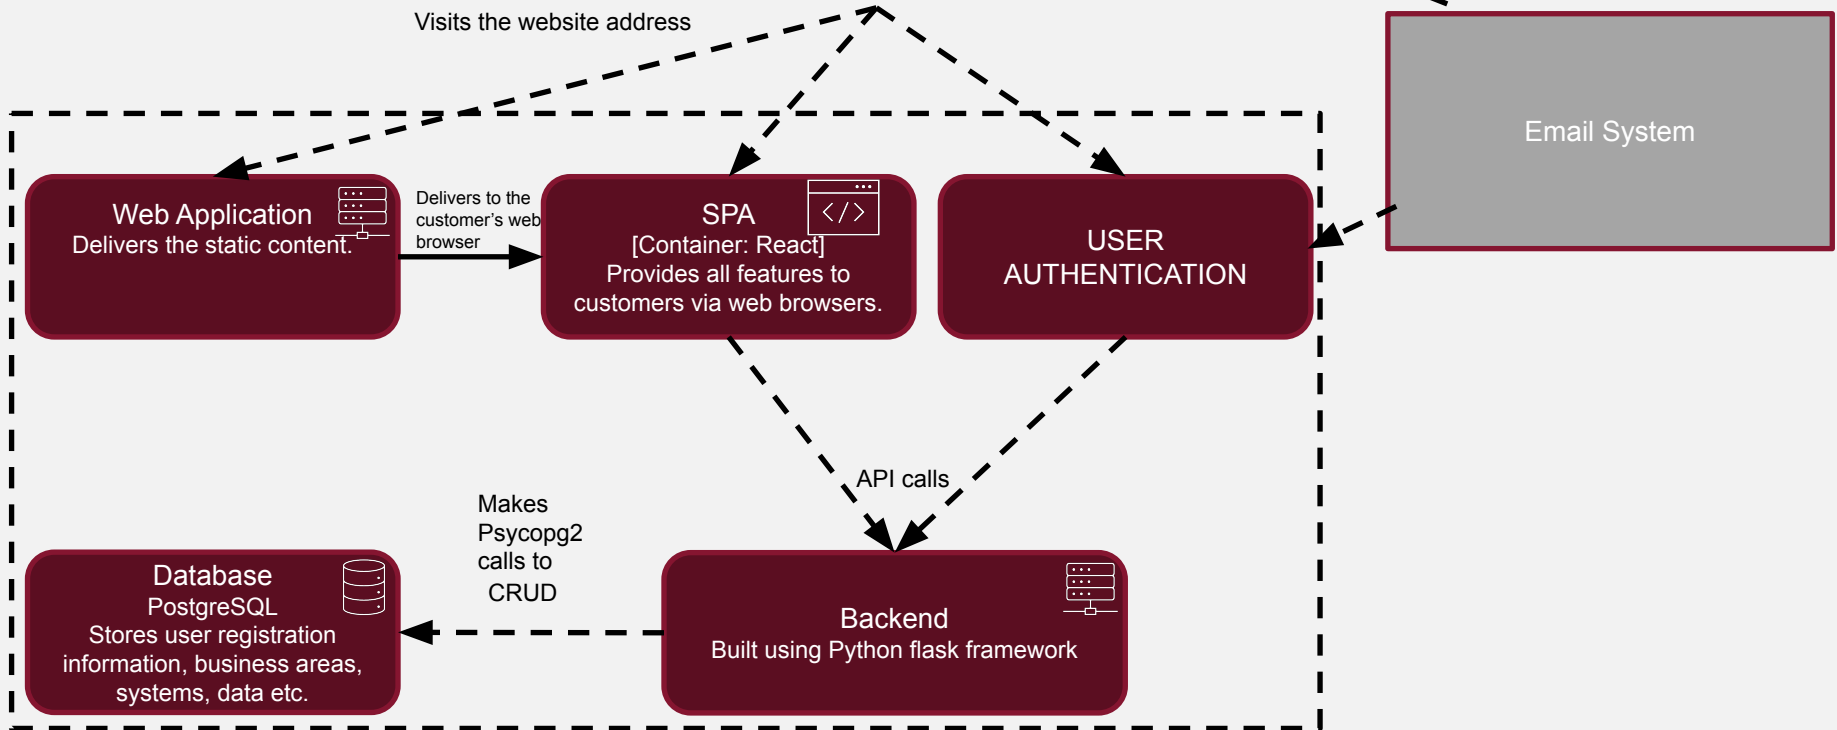

LEVEL I: SYSTEM CONTEXT DIAGRAM

LEVEL 2: CONTAINER DIAGRAM

User
[Person]
A user wants to see the visualized data.

LEVEL 3: COMPONENT DIAGRAM

SPRINT #3 (NOV 03 – NOV 17)

Analyze CKAN Risks

- Lack of resources
- Lacks helps from developers
- Not what we need
- Difficult to modify

Setup Development Environment From Scratch

- Setup Flask app for backend
- Setup React NextJS for frontend
- Setup PostgreSQL Database

Build the Business Area Domain (end-to-end)

- Build Model (Database Table), Controller, Service and Repo

SPRINT #4 (NOV 17 – DEC 1)

Build the System domain (end-to-end)

- Build Model (Database Table), Controller, Service and Repo

Deployed frontend NextJS on Vercel

- Platform for frontend frameworks and static websites

Deployed backend Flask app on AWS

- Using Elastic Beanstalk EC2 with CodePipeLine

Set up PostgreSQL database on AWS RDS

Integrated CI/CD with Github

- Continuous Integration/ Continuous Delivery/Deployment

MVP DEMO

WINTER SPRINT (DEC 19 – JAN 08)

- Build the Table domain (end-to-end)
 - Build Model (Database table), Controller (JSON), Service and Repo
- Pre-process Data
 - Python script to analyze and connect data
 - Store the processed data in the database

PLAN FOR
REMAINING
SPRINTS

Build Data domain

User Management feature

- Create Identity Access Management for admin and user roles

Implement Google-like intelligent search
